

Interactive Prototype & Usability Validation

Transition Logic, User Micro-Interactions, and Usability Iteration Report

Project: GoalTrack (Habit & Workflow Tracker) **Tool:** Figma Prototype Engine **Interaction Mode:** Clickable Flow

Target: Mobile (iOS / Android)

1. INTERACTIVE SCOPE & NAVIGATION ARCHITECTURE

Building directly upon the low-fidelity architecture from Task 1, this milestone converts static wireframes into a fully functional, clickable mobile experience. Interactions are focused on proving end-to-end task flows, thumb reachability, and zero-friction user activation.

Interaction Trigger	Transition & Timing	Design Rationale & User Impact
Onboarding → Sign Up	Push / Slide Left (300ms ease-out)	Creates a progressive forward motion as the user begins the account creation journey.
Sign Up → Set First Goal	Smart Animate (250ms linear)	Bypasses empty dashboards and immediately primes user engagement with a single task setup.
Save Goal → Dashboard	Instant with Button Feedback	Delivers immediate feedback on action completion and reveals updated metrics in the hub.
Bottom Bar → Analytics	Instant Tab Transition	Provides responsive switching between daily operational tasks and historical progress analytics.

2. USABILITY TESTING & OBSERVATIONS

Observation 1: Onboarding Pacing

Testers completed the complete flow from landing to their first goal setup in an average of 42 seconds without hesitation or drop-off.

Observation 2: Navigation Feedback

Users requested an explicit back option on the analytics screen to avoid relying solely on bottom tab navigation.

3. REFINEMENTS IMPLEMENTED

- Standardized Touch Targets:** Expanded primary interaction zones to 48px to accommodate natural thumb reach on mobile displays.
- Eliminated Dead Ends:** Introduced dedicated return breadcrumbs on nested views based on peer feedback.
- Interaction Smoothing:** Replaced abrupt screen cuts with horizontal sliding animations (300ms ease-out) to mimic native mobile transitions.

4. Prototype Verification Artifacts
